Introduction

- This CV template is created by Christine P. Chai (`cpchai21@gmail.com`) from the ModernCV template (Xavier Danaux). The ModernCV package in LaTeX can be downloaded on *GitHub* or Overleaf.

- The original ModernCV template is awesome, and I use it for a wide variety of documents, such as resume/CV, cover letter, and even project descriptions. Therefore, many settings need to be customized to meet my needs. I would like to share this CV template, which includes the modifications I frequently use.

- Here is a list of what I modified:
  - Use the `today` command to show the date when I last modified this document.
  - Put the dates on the right hand side, instead of at the beginning of each row.
  - Add a contents section. This is recommended for a document with more than 10 pages.
  - Add the page number at the bottom right of each page.
  - Utilize the `input` command to add a section directly from another `.tex` file.
    When each section is long, this keeps the main document short and easy to maintain.

Disclaimer

- This template works best for long documents, such as a full CV or a file for all project descriptions.
  For industry job applications, it is still recommended to submit a one-page resume and be concise.

Education

- **Ph.D. in Subject**, *University of Elsewhere*, Country CC, 2016 – Present. GPA: 4.0/4.0.
  Research areas: field one, field two, and field three.
- **B.S. in Subject**, *University of Somewhere*, Country AB, 2012 – 2016. GPA: 3.88/4.0.
  Minor in another subject.
